Generative-AI Worldwide

GenAI: Everywhere and for all Stakeholders

From digital marketing tools/methods (e.g., Ads, SEO, social media, pricing, reviews, etc.) to customer service and how customers/public search (e.g., multimodal search in Google, Bing), understanding how it works and how it influences markets, businesses, customers/users, and society is a must.

Meta is labeling AI content, including video and audio, while introducing photorealistic images “Imagined with AI.”

The collage consists of five overlapping screenshots:

- Amazon Product Page:** Shows the Amazon product page for the LG C2 65-inch OLED TV. It features AI-generated customer reviews and a summary. The reviews are generated from the text of customer reviews. The summary is generated from the text of customer reviews. The summary is generated from the text of customer reviews.
- Facebook Post:** Shows a Facebook post by Anna Soe, AI info · 5h ·. The post features a llama wearing a red vest. A note indicates that the text and design are not final.
- Instagram Post:** Shows an Instagram post by sasha.does.voices, AI info ·. The post features a robot painting a picture. A note indicates that the text and design are not final.
- AI Assistant Interface:** Shows the AI Assistant interface with a prompt to ask for key takeaways, insights, and other information about a document, all with generative AI.
- AI Assistant Interface:** Shows the AI Assistant interface with a prompt to ask for key takeaways, insights, and other information about a document, all with generative AI.

GenAI: Between Advances & Restrictions

It is important to be aware of the policies and regulations on the use of GenAI/GPT in different countries, companies, and institutions

The UK needs new laws to protect workers whose employers use artificial intelligence tools to hire, fire or manage them, the Trades Union Congress said on Thursday, warning that Britain was “losing the race” to regulate AI at work.

Assignments that you didn't write yourself may be deemed fraudulent

The UvA's fraud and plagiarism regulations state that lecturers must be able to assess a student's knowledge, insight and skills. We therefore expect students to write everything they submit themselves. Unless explicitly stated otherwise, the use of AI tools such as ChatGPT is therefore not permitted. Consequently, submitting assignments that you didn't write yourself may be deemed fraudulent. In cases of fraud, the UvA will take strict action.

GenAI (un)intended effects & EU AI Act?

RESEARCH ARTICLE | [Full Access](#)

Unintended effects of algorithmic transparency: The mere prospect of an explanation can foster the illusion of understanding how an algorithm works

Massimiliano Ostinelli [✉](#) Andrea Bonezzi, Monika Lisjak

Abstract

This research shows that merely believing that one can access an explanation of how an algorithm works can foster an illusory sense of understanding the algorithm, even when people do not actually access and read the explanation. This effect occurs because the belief that one can access an explanation provides a feeling of empowerment that fosters an illusory sense of understanding. In turn, this illusory sense of understanding can yield unfounded reliance on algorithmic determinations. We further show that this effect is moderated by the target of an explanation and by the perceived utility of an explanation in enabling consumers to use an algorithm more effectively. From a theoretical standpoint, we offer a novel psychological account of illusory understanding based on empowerment. From a practical standpoint, we point to an unintended effect of algorithmic transparency: merely knowing that one can access an explanation for how an algorithm works may lull consumers into a false sense of understanding that yields unfounded reliance on algorithmic recommendations.

EU AI ACT - Legislation

- Some AI uses will get banned later this year (e.g., facial recognition)
- It will be more obvious when you're interacting with an AI system (disclosing AI use, think of deep fakes)
- Citizens can complain if they have been harmed by an AI (AI literacy?)
- AI companies will need to be more transparent (how?)

Food for thought: How might the illusion of understanding, as identified in the study on algorithmic transparency, influence the effectiveness of the EU AI Act and multi-actor dialogs?

From AI Assistant/Employee/Agent/GPT to Multi-Agents to AGI?

Agent: An entity that perceives its environment and acts to achieve specific goals.

Multi-Agent: Involves multiple agents interacting within an environment, working together to accomplish more complex tasks.

AGI (Artificial General Intelligence): A theoretical form of AI capable of understanding and learning any intellectual task that a human being can.

Attention: Generative AI that can be unreliable and enter a dreamlike, zoned-out state, leading to something called "hallucination." Outcome quality is still an issue in single (e.g., GPT) and multi-agent systems. This means the AI can provide a convincing but completely made-up answer/outcome. Human know-how, training, feedback, and input are needed!

Privacy/legislation/competition/market changes are motivating businesses to build multi-agents in-house

Artificial Intelligence and Management: The Automation–Augmentation Paradox

Sebastian Raisch and Sebastian Krakowski

Published Online: 14 Jan 2021 | <https://doi.org/10.5465/amr.2018.0072>

 Tools  Share

Abstract

Taking three recent business books on artificial intelligence (AI) as a starting point, we explore the automation and augmentation concepts in the management domain. Whereas automation implies that machines take over a human task, augmentation means that humans collaborate closely with machines to perform a task. Taking a normative stance, the three books advise organizations to prioritize augmentation, which they relate to superior performance. Using a more comprehensive paradox theory perspective, we argue that, in the management domain, augmentation cannot be neatly separated from automation. These dual AI applications are interdependent across time and space, creating a paradoxical tension. Overemphasizing either augmentation or automation fuels reinforcing cycles with negative organizational and societal outcomes. However, if organizations adopt a broader perspective comprising both automation and augmentation, they could deal with the tension and achieve complementarities that benefit business and society. Drawing on our insights, we conclude that management scholars need to be involved in research on the use of AI in organizations. We also argue that a substantial change is required in how AI research is currently conducted in order to develop meaningful theory and to provide practice with sound advice.

Definition: “Whereas **automation** implies that machines take over a human task, **augmentation** means that humans collaborate closely with machines to perform a task”

Automation

Replace human intelligence with artificial intelligence.

Augmentation

Augment human intelligence with artificial intelligence.

Chat GenAI in Practice

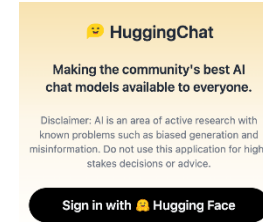

Chat GenAI: Prompts & Prompting

A prompt is any phrase or set of keywords you can input into an AI tool such as ChatGPT, Bing/Edge chat, Gemini HuggingChat. The tool will interpret the prompt and generate a response based on its existing knowledge base.

PROMPT contains any of the following elements:

- **Instruction** - a specific task or instruction you want the model to perform
- **Context** - external information/additional context that can steer the model to better responses
- **Input Data** - the input or question that we are interested in finding a response for
- **Output Indicator** - the type or format of the output.

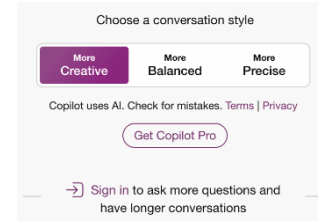

You do not need all the four elements for a prompt and the format depends on the task at hand.

GenAI & Other Tools: Basic Marketing Prompts

Exercise: Try the following basic prompts in the different GenAI tools: How do the different GenAI tools work? Have you spotted any differences?

1) Marketing Channel: Ask which channel to focus on for your campaign.

"Which is the best marketing channel for Unilever?"

2) SEO: Get insights on keywords

"Give me long-tail keyword suggestions about cybersecurity"

3) Sentiment Analysis:

"Classify the text into neutral, negative or positive.

Text: I think the food was okay. Sentiment:"

GenAI & DMA: More Marketing Prompts

Self-Exercise: Try the following prompts in the different GenAI tools. How do the different AI tools work? Have you spotted any differences?

1) Have it create its own prompt:

"I want to create a new marketing plan for the [Dutch government](#). Tell me what information you need to create the best plan. At the end, create a prompt my team and I can use in the future for similar requests."

2) Develop mental models for complex concepts:

"Help me create mental models or analogies to better understand and remember key concepts in [SEO](#)"

3) Translate any content:

"Translate the tweet to English. Here is the tweet: [Ziggo verhoogt vanaf vandaag de beeldkwaliteit van de Ziggo GO tv-app naar full HD \(1080p\) voor klanten die kijken via smart tv's en streaming-apparaten. Deze verbetering geldt voor live tv op de top 12 lineaire kanalen. #ziggo](#)"

TIP: Could you try to replace the highlighted keywords?

GenAI: Break Complex Tasks Into Steps

Self-Exercise: Try the following prompt in the different AI tools: How the different AI tools worked? Have you spotted any differences?

“You are an experienced **social media specialist** with high levels of **expertise** and **authority** within the **digital marketing industry**. You have exceptional vocabulary and you are able to explain complex topics to beginners with ease. You work for **Nationale-Nederlanden**. Your task is to write two **social media posts** about **insurance** that will be published online on different **social media platforms and in advertisements**. Your writing style is informative, friendly, and engaging while incorporating **humor, paralinguistics, and real-life examples**. The response should be approximately 100 words long and written in **a snappy and punchy style, using short sentences and non-standard, conversational grammar**. I want you to write in the same way you would write to a **new customer**. Do you understand?”

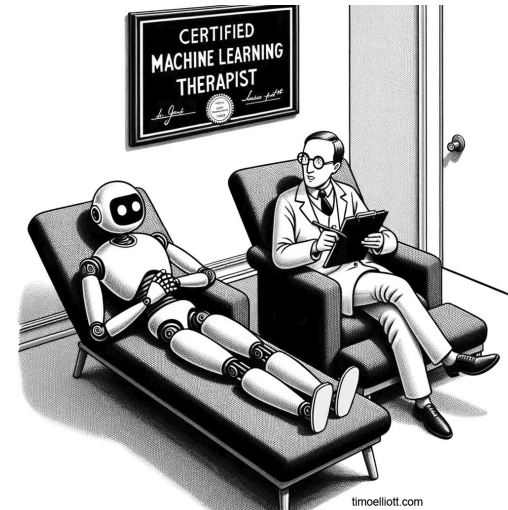

Extra Tips:

- 1) If you want to reset a conversation without starting a new one, you can use the phrase **"Ignore all previous prompts in this conversation"**. This will allow you to start over without any confusion or unnecessary repetition.
- 2) Ask it for the answer only without the conversational element. **"Do not write any pre or post text, just write the response and only the response."**
- 3) Ask it not to apologise when writing. **"Do not apologize or explain, just write the response and only the response."**
- 4) When providing instructions about tone and writing style in your message, **use (parenthesis) or [square brackets]** to separate them from the actual task. This will help avoid confusion and ensure that the instructions do not get mixed up with the content of the message.

Extra: Advanced GenAI Knowledge – Not for the exam

If you are keen on delving into the advanced applications of GenAI for work, freelance projects, or research, these resources could be quite helpful. They offer in-depth insights that transcend the foundational knowledge in the DMA course. For those looking to push the boundaries of their AI expertise, exploring these materials could prove to be very valuable.
